

Belleville Township Water Service Line Inventory

The attached list is a copy of the water service line inventory for the Township's service area, which includes the entire Township except the area south of Newark Avenue. The water distribution system south of Newark Avenue is owned and maintained by the City of Newark.

Each address has been assigned a "Tier" and "Category" based on the age of the building. If your building is a Tier 1 Category i, Tier 2 Category iv, and Tier 2 Category x, your water service line from the street is most likely a lead line. However, building age alone may not provide enough information to classify if a location has a lead service. The existence of a lead service should be verified at the water meter.

In addition, please be advised that a water service line is owned by both the Belleville Water Department and property owner. The Belleville Water Department is responsible for the water main in the street and the water service line to the curb stop at the curb; and, the property owner is responsible for the portion of the water service line from the curb stop at the curb to the meter in the building, as well as the internal plumbing and fixtures.

See the attached New Jersey Department of Environmental Protection Fact Sheet for more information regarding lead service lines.

The addresses highlighted in red in the water service inventory recently had their lead service line replaced with copper by the Township.

If you have any questions, you can contact the Belleville Engineering Office at 973-450-3414.
